Alfresco is used within a company for the management of its various digital systems and digital systems such as videos, documents, images, and records. WebDAV, CIMS, SMB, and FTP can be used for accessing the file repository of hosted Alfresco. With Alfresco, many enterprise challenges can be addressed, including displaying important information at one place and keeping track of employee performance. For getting the advantages of community-driven development, Alfresco Community Edition could be the best option for your enterprise. When talking about availability and scalability, Alfresco does have some limitations. For instance, the community edition of Alfresco does not support clustering. The quality assurance and the bug fixes are also limited. However, Alfresco Community Edition provides enterprises of different levels with ease of managing their content and non-critical business process. It is easy to use and the source code of the Community Edition is also publicly available. As a developer, I prefer the services of Alibaba Cloud to deploy Alfresco. Alibaba Elastic Compute Service (ECS) is highly scalable and flexible. You can upgrade the hardware resources anytime when required. Alibaba Cloud can also provide you technical support and assistance in order to launch any of your system. Alfresco does not restrict its installation to any specific operating system (OS). You can use any operating system (OS) of your choice; however, the installation steps would vary according to the choice of operating system. In this tutorial, we will be installing and configuring Alfresco Community Edition on an Alibaba Cloud Elastic Compute Service (ECS) instance with CentOS 7. Prerequisites: You must have Alibaba Cloud Elastic Compute Service (ECS) activated and verified your valid payment method. If you are a new user, you can get a free account in your Alibaba Cloud account. If you don't know about how to setup your ECS instance, you can refer to this tutorial or quick-start guide. Your ECS instance must have at least 4GB RAM Tegw # .ocserfIA fo noitlatsni refra ro gnairud squb ot eud elbuort of uoy lebut ton limsserfIA ocserfIA laicifo eht yb dedivorp taht ocfeet tdnemc pets tx eht noitidE ytinummoC ocserfIA ltsni ltsni sce sct ltsni ts ila jun eratsni Muy Odus # Sibsab roirp id e GnidoolWod ES .Self wed a gnidide rof rof rof rof rof rof rof sinisuse ew ew .ylisae self gnididie spleh of .Self tneffid tide ot desu rotide onan ht ht ht ht ht spyt ht spel RO xifs evomer .snoitlats of evoba eht il gnelpmoc refra Leved-Lgbl-aseM oriac ulgbl lletsni y- muy odus # Leved-Lgbl-aseM .oroc .Orbil lltus y-spuc y-spuc # Muy Odus # ECI bil llatni MSbil llatni y- muy odus # MSbil llatni gnifnoctnof llatni y- muy odus # gnifnoctnof llatni .sdnammoc tnaveler eht gniretn yb snoitlatsni gnivollof eht mrofrpe .dellatsni eb ot sdeen taht seicnedneped emos eriuqer nigulp eciffOerbil eht .metsyS gnitarepO ruoy no noitidE ytinummoC ocserfIA etucexe ot deriuqer smargorp eht lla sniatnoc ocserfIA yb egakcap reltatsni siht .etisbew laiciffo rieht no elbaliava ylisae si ocserfIA rof egakcap reltatsni eht seicnednepeD deriuqer llatni .seglivirp toor htiv resu etarec dna emantsoh s'revres ruoy pu teS CP ruoy ni dellatsni tneic HSS ro duoC ababIA ruoy ni elosnoc CNV ot sseccA sserdda Pi s'SCE duoC ababIA ruoy ot detniop eb tsum eman niamod .sdrocer revreman niamod sti etadpu nac uoy .tsoh rehto yna ro duoC ababIA morf niamod a deretsiger ydaerla evah uoy fl .duoC ababIA morf deretsiger eman niamod A .Rosecorp EroC otmemom la etnemactarmotua israiva rep otaliba ocserfIA izivres li erenetto orassecen À ocserfIA avvA ltcmetys oduS # .oivva id oizivres li otirof Àig ah enoizallatsni id ammarorp li ©Ahclop .enoizacilppa aut al otibus eraiva ehcna iouP .tuptuo etneuges li noc etnemataidemm i eraizini ebbervod revres li e "Y" eranozeles . This will be done by the firewall settings mentioned with details at the end of this tutorial. Go to a browser and log on to where 47.90.214.177 is my public IP. Remember to replace it with yours. Upon loading this, you will be shown Alfresco's landing page. Configure Reverse Proxy By default, Tomcat server runs on port 8080. Here we are going to use Nginx as a reverse proxy for the application to be easily accessible through the standard HTTP and HTTPS ports. We will also be configuring Nginx for using an SSL generated with Let's Encrypt free SSL. Now, install Nginx server. # sudo yum -y install nginx We will be starting the web server along with enabling it to automatically start at the boot time. # sudo systemctl start nginx # sudo systemctl enable nginx Next, you need to configure your reverse proxy. All we need to do is to create a new block file in Alfresco. # sudo nano /etc/nginx/conf.d/softpedia.xyz.conf Here softpedia.xyz is the public domain name, replace it with yours. The next thing is that we shall be populating this file with the following code. server { listen 80; server_name softpedia.xyz; location / { root /opt/alfresco-community/tomcat/webapps/ROOT; proxy_set_header X-Real-IP \$remote_addr; proxy_set_header X-Forwarded-For \$proxy_add_x_forwarded_for; proxy_set_header X-Forwarded-Proto \$scheme; proxy_set_header Host \$http_host; proxy http version 1.1; proxy_pass proxy_redirect default; } location /share/ { root /opt/alfresco-community/tomcat/webapps/share/; proxy_set_header X-Real-IP \$remote_addr; proxy_set_header X-Forwarded-For \$proxy_add_x_forwarded_for; proxy_set_header X-Forwarded-Proto \$scheme; proxy_set_header Host \$http_host; proxy http version 1.1; proxy_pass http://localhost:8080/alfresco/; } } Save the modified changes and close the file. Now we are finished with the necessary changes made for the configuration. Restart the server to save the configuration and for changes to effect. # SUDO SYSTEMCTL Restart Nginx Alfresco now go to (or your domain name) and access the various services of Alfresco Community Edition. Use the credentials provided during the Alfresco installation process. Alfresco Community Edition is now accessible through the domain name, easily. Now you can use the incredible services provided by this application by providing authenticated administrative credentials. Set the firewalls for HTTP and HTTPS if they have been activated à à à à à à à à Firewall, you will need to define a rule in the Alibaba Cloud Security group for your Cloud server to add an exception for Porta 80/TCP and 443/TCP. It is possible to enable these doors during the creation of the ECS instance, but in the event that you have forgotten to unlock these doors, you can follow the procedure below. By default, these doors are blocked by firewalls. In addition, we have to add the 8080 door to access alfresco. To do it, go to the elastic calculation service section. Click more for the ECS which is used for Alfresco and click on configuration of the security group. Click Configure rules and then click quickly create the rules. Add the configurations as shown in the screenshot below and click OK. Ok.
